

Dương Cát Vũ

SOFTWARE ENGINEER

PROFILE

Born and raised in Ho Chi Minh City, I graduated from Cybersoft Academy. I'm passionate about software development, enjoy working in teams, and continuously strive to improve myself every day. My interests include coding, reading books, studying economics, and exploring product sales and market analysis.

SKILLS

Tech Stack

Frontend:	HTML, CSS, Js, Ts, Reactjs, Nextjs
Backend:	Node.js, Express, MongoDB
DevOps & Cloud:	Docker, Git, CI/CD, AWS
Tools:	GitHub, Vite, Webpack, VS Code, Cursor, Figma

Soft Skills & Methodologies

Teamwork & Communication

Problem Solving & Critical Thinking

Agile/Scrum Workflow

Time Management

Self-learning & Adaptability

EXPERIENCE

6/2022 - present (HCMC)

Vizion Technologies LLC

- Built and maintained multiple platforms and demo sites using ReactJS, ThreeJS, and supporting libraries for industries like real estate, manufacturing, and hospitality.
- Developed backend services and infrastructure to support Vizion's platform, including cloud deployment and CI/CD pipelines on AWS.
- Integrated Google Analytics to track user behavior across virtual tours and generate insight reports within the Vizion Portal.
- Collaborated with the AI team to embed smart tools into the platform, enhancing interactivity and personalization.
- Collaborated in an Agile/Scrum team to plan, develop, and deliver immersive virtual experiences across multiple industries.

PROJECT EXPERIENCE

Vizion Virtual Tour Platform - Fullstack Developer

Team size: 10 | Technologies: ReactjS, NextjS ,ThreejS, Node.jS, MongoDB, AWS, Docker.

Developed a web-based 3D virtual tour platform for real estate and manufacturing sectors.

Built both frontend (React + Threejs) and backend (Nodejs + MongoDB) components.

Deployed the system on AWS using EC2, S3, and CloudFront with CI/CD automation.

Integrated Google Analytics to track user behavior and generate reports in the admin dashboard.

Khai Hoan Prime - Frontend & DevOps

Team size: 3 | Duration: 8 months Technologies: ReactjS, ThreejS, AWS.

Developed a 3D virtual tour platform for the Khai Hoan Prime real estate project, showcasing two apartment towers with full surrounding amenities.

Developed a 3D virtual tour platform for the Khai Hoan Prime real estate project, showcasing two apartment towers with full surrounding amenities.

Deployed the system on AWS using EC2, S3, and CloudFront with CI/CD automation.

The Larita - Frontend & DevOps

Team size: 3 | Duration: 6 months Technologies: ReactjS, ThreejS, AWS.

Designed and implemented a 3D web-based virtual tour for The Larita apartment complex, enabling users to explore two modern residential towers and surrounding amenities such as parks, retail areas, and shared facilities.

Utilized ThreejS to build immersive navigation experiences and integrated the UI using Reactjs for a responsive, dynamic

Brothers Furniture - Fullstack Developer

Team size: 4 | Duration: 6 months Technologies: ReactJS, ThreeJS, NodejS, MongoDB, AWS.

Developed a secure 3D virtual tour platform for Brothers Furniture, allowing users to explore showroom spaces and product displays interactively online.

Built the frontend using Reactjs and Threejs for real-time 3D navigation and visual effects.

Implemented authentication and access control, requiring users to enter a valid password before accessing the virtual experience.

Designed and integrated backend services using Nodejs and MongoDB to manage tour data and user access credentials.

Deployed the full application on AWS, ensuring stable performance and secure data handling.

Bcons Solary - Frontend & DevOps

Team size: 4 | Duration: 6 months Technologies: ReactJS, ThreeJS, NodejS, MongoDB, AWS.

Built an interactive web application to showcase the Bcons Solary apartment project through an engaging 3D experience.

Used Threejs to render smooth transitions and spatial navigation between different apartment zones and amenities.

Developed a dynamic and responsive interface with Reactjs, focusing on user engagement and intuitive exploration.

VNNIC - Fullstack Developer

Team size: 5 | Duration: 7 months Technologies: ReactjS, ThreeJS, Nodejs, MongoDB, Docker, AWS.

Developed a secure 3D virtual tour platform for VNNIC, featuring two-layer authentication to ensure restricted access to sensitive internal environments.

Integrated a real-time IoT monitoring dashboard, displaying data from connected devices directly within the virtual space, with inputs managed via a custom-built admin portal.

Built the frontend with Reactjs and Threejs, enabling immersive navigation, and developed the backend with Nodejs and MongoDB to manage user sessions, device data, and access control.
